## Basic-Training I and II

### Basic-Training I:

- Introduction to the concepts of lighting and optics for machine vision
- Concepts, terms and typical sources of errors
- Different testing and measurement situations and the selection of appropriate components (lenses, light filters ...)
- Finding the right lighting

### Basic-Training II:

- Tasks solvable with PICTOR®
- VCWin user interface
- Parameterizing and configuration of test programs
- Interfaces, communication and integration in different environments
- Evaluation of testing tasks
- Optimization of testing programs
- Hands-on training with your own samples

These two courses build on each other and concern the foundations of machine vision and its industrial deployment. Dates can be found on the page »[Events](#)« or may be arranged custom.

### Caminax®-Course

If you are interested in knowing the performance of Caminax® and how to deploy it you may wish to attend a one-day course concerning this smart-camera.

For beginners we recommend to combine it with the Basic-Training I. Anyhow, the Caminax-training is meant to meet your special needs and so it will be customized according to our arrangement.

If you are interested in taking part of this course please [contact us](#).

### Contents:

- Overview
- The first Caminax®-Programm
- The modules
- Dependencies of modules
- Combination of modules and practical examples
- Individual customized part with exercises

## Custom Courses

Furthermore we provide especially for you designed courses. This may be the case after the developement of your new product, when your distribution team has to be trained.
